

ASAN International Visiting Scholars (IViS) Program

Leading the Future of Health 

According to the mission of ASAN Medical Center, IViS Program aims to contribute to the health of society by providing the highest quality education for the health of mankind.

For years, AMC has been successfully training overseas physicians to share the advanced medical skills, technology, and research work of AMC.

By pairing these experiences, overseas physicians are able to comprehend clinical application concepts observed during training, and are able to apply these concepts in clinical scenarios back at their nations.

In addition, networks established among international physicians through AMC training program have enabled the co-development of medical standards in diverse nations.

AMC Clinical Fellowship Hands on Program

Leading the Future of Health 

AMC Clinical Fellowship is a structured clinical training program that allows international physicians to participate in supervised hands-on training for up to one year, in accordance with the Korean Ministry of Health and Welfare's regulations on Limited Medical Practice. All clinical activities are performed under the direct supervision of an assigned faculty member and within the approved scope of practice.
